PROFESSIONAL SUMMARY

With over 10 years of experience in B2B SaaS (AgTech), I have developed a cross-functional profile combining Customer Success, technical skills and API integration. I now specialize in process automation (n8n, Make) and AI multi-agent systems (Python), designing operational solutions based on real business needs.

WORK EXPERIENCE

Customer Success Manager – Europe / CIS / US

March 2022 - March 2026

EarthDaily Agro - Thoiry, France · Remote (EMEA / US)

- Led the technical side of an agricultural detection project (Belgium): automated field digitization and satellite-based detection of emergence and harvest → **POC converted into a 3-year contract with an expanded project scope.**
- Designed a modular Jupyter notebook for bulk export of NDVI maps for a cooperative with 1,100 fields (a feature missing from the product) → **architecture adopted as my team's standard, -40% build time.**
- Built reporting notebooks on top of the Matomo and JIRA APIs → **+70% visibility into product usage** and **+60% into support responsiveness.**
- Accelerated API onboarding for new customers with documented Postman collections, **reducing support ticket volume by around 30%.**
- Sales engineering and pre-sales: product and API demos (Postman) for prospects, and design of custom solutions for needs beyond the product.
- Technical support (JIRA): reproducing and resolving incidents (web application, APIs), working with engineering on complex cases.

Customer Success Manager – CIS

July 2017 - March 2022

EarthDaily Agro - Moscow, Russia

- Integrated public weather station data (temperatures, precipitation) into an application dashboard, with regional filters and CSV export → **contract renewed for an additional 3 years.**
- Web/API synchronization for an agroholding: aligned the data architectures between the customer's solution and ours → **contract renewed for an additional 2 years.**
- Annual on-site training for a dozen customers and onboarding of new customers → **85% customer satisfaction.**
- Technical support (JIRA) and customer guidance on API integration, with Postman demos (from 2019).
- Single point of contact between customers and technical teams: gathering requirements, writing specifications and validating solutions.

EarthDaily Agro - Krasnodar, Russia

- Supported a major agroholding in Kazakhstan in adopting our SaaS crop monitoring solutions, including deployment and user training on our web platform and mobile field monitoring application → **3-year contract**.
- Collaborated with a partner on a mobile application POC for agricultural insurance: integration of our NDVI maps, customization of field forms and adaptation of interfaces for expert users → **strengthened relationship with a strategic customer**.
- Digitized customers' field boundaries and prepared data (QGIS, Google Earth).
- Technical support (JIRA), customer training and pre-sales demos, including the YugAgro trade show.

AI & AUTOMATION PROJECTS (PORTFOLIO)

Streetlifting AI Coach (Personal Project)

Designed to simplify workout tracking and eliminate manual spreadsheet management, this AI coach generates personalized training plans in seconds and automatically adapts future sessions from voice or text debriefs through a multi-agent architecture built with Streamlit, n8n and generative AI.

Agri Monitor (Personal Project)

Water stress monitoring data is often scattered across multiple sources. I developed a multi-agent system able to centralize and analyze satellite, weather and field data to detect water stress and generate agronomic recommendations using Python, Streamlit and AI agents.

NEOBATI (RNCP Level 6 Capstone Project)

Small businesses still spend considerable time on repetitive administrative tasks. I designed an automation solution covering the core business workflow, from customer management to invoicing, reminders and project tracking, using Airtable, Make and AI-powered automations.

EDUCATION

RNCP Level 6 Certification - Automation & AI (No-Code / Low-Code) - École Cube, France | June 2026

Google Prompting Essentials Certificate - Google Career Certificates | 2025

Tourism and Event Management Program - École Internationale Tunon, Genève | 2006 – 2008

TECHNICAL SKILLS

APIs, Data & Remote Sensing : REST APIs, JSON, Postman, Jupyter, QGIS, Google Earth, Vegetation Indices

AI & Automation : Claude AI, ChatGPT, Claude Code, Python (AI-assisted development), AI multi-agent systems, n8n, Make, Airtable

Tools & Infrastructure : Docker (basic), Git & GitHub, VS Code

CS & Product Tools : HubSpot, JIRA, Confluence, Matomo

Productivity : Microsoft 365, Google Workspace

LANGUAGES

French : Native

Russian : C1

English : B2

Spanish : Basic
